## GRIPPER G2 USER MANUAL

S H E N Z H E N   U F A C T O R Y   C O . ,   L T D .

V 2.7.0

# 1. Introduction

---

## 1.1 Gripper G2 Overview

The Gripper G2 is an end effector tool capable of dynamic grasping.

The range of Gripper G2 is: 0 to 840. A larger value indicates a wider opening of the gripper, while a smaller value indicates a narrower opening.

---

## 1.2 Setup and Control

The UFACTORY Gripper G2 establishes power and communication with UFACTORY robotic arms via contact pins or a single cable. The end effector provides 24V power to the gripper and enables serial RS485 communication with the robot controller.

The default baud rate for the UFACTORY Gripper G2 is 2000000.

---

## 1.3. Safety

### WARNING

Operators must read and understand all instructions in this manual before using Gripper G2.

### NOTE

The term "operator" refers to anyone responsible for performing any of the following operations on the Gripper G2:

- Installation
- Control
- Maintenance
- Inspection
- Calibration
- Programming

- Decommissioning

This document describes general operations throughout the lifecycle of Gripper G2, from installation and operation to usage. Graphics and photos in this document are representative examples; they may differ from the delivered product.

### 1.3.1. Warnings

#### NOTE

Failure to heed warnings when using the gripper may result in operator injury or equipment damage.

#### WARNING

- The gripper must be properly secured before operating the robot.
- Do not install or operate a damaged gripper or one with missing parts.
- Never supply AC power to the gripper.
- Ensure all wiring terminals are securely connected at both the robotic arm and gripper ends.
- Always use the recommended electrical connections.
- Before initiating the robot program, ensure no personnel are within the path of the robotic arm and gripper.
- Never exceed the gripper's payload capacity.
- Set the gripper's speed appropriately for your application.
- Keep fingers and clothing away from the gripper when power is on.
- Do not use the gripper on humans or animals.

### 1.3.2. Risk Assessment and Final Application

Gripper G2 is designed for industrial robots. A risk assessment must be performed for the robot, gripper, and any other equipment used in the final application. It is the robot integrator's responsibility to ensure compliance with all local safety measures and regulations. Depending on the application, additional protective/safety measures may be required due to risks, for example, if the workpiece handled by Gripper G2 poses inherent hazards to operators.

### 1.3.3. Intended Use

Gripper G2 is used for grasping and temporarily securing or holding objects.

## **WARNING**

Gripper G2 is NOT intended for applying force to objects or surfaces.

This product is designed for installation on robots or other automated equipment.

## **INFO**

- Always comply with local and national laws, regulations, and directives regarding automation safety and general machine safety.
- This equipment may only be used within its specified technical data. Any other use of the product is considered improper and unintended.
- UFACTORY shall not be liable for any damage caused by any improper or unintended use.

## 2. Installation

### WARNING

Before installation:

- Read and understand all safety instructions related to Gripper G2.
- Verify the package contents against the packing list and purchase order.
- Prepare all required parts listed in the requirements.

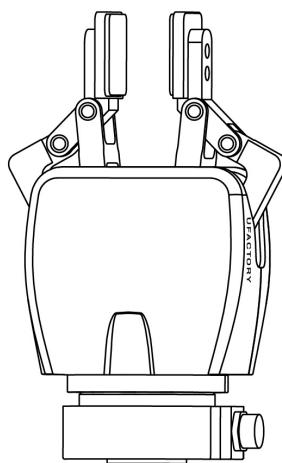

During installation:

- Meet the environmental conditions.
- Do not operate the gripper or power it on until it is securely mounted and the hazard area is cleared. The gripper fingers may move and cause injury or damage.

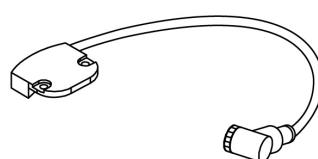

### 2.1. Packing List

The Gripper G2 kit typically includes the following items (as shown in the figure below):

- UFACTORY Gripper G2 (1 unit)
- Gripper G2 adapter cable (spare)
- Cross recessed head screw M6\*12 (2 pcs)
- Cross recessed head screw M6\*16 (2 pcs)
- Cross recessed head screw M6\*22 (2 pcs)

Gripper G2 Adapter Cable (1pcs)

Cross countersunk head scres M6\*12(2)

Cross countersunk head scres M6\*16(2)

Cross countersunk head scres M6\*22(2)

UFACTORY Gripper G2

## 2.2. Mechanical Installation

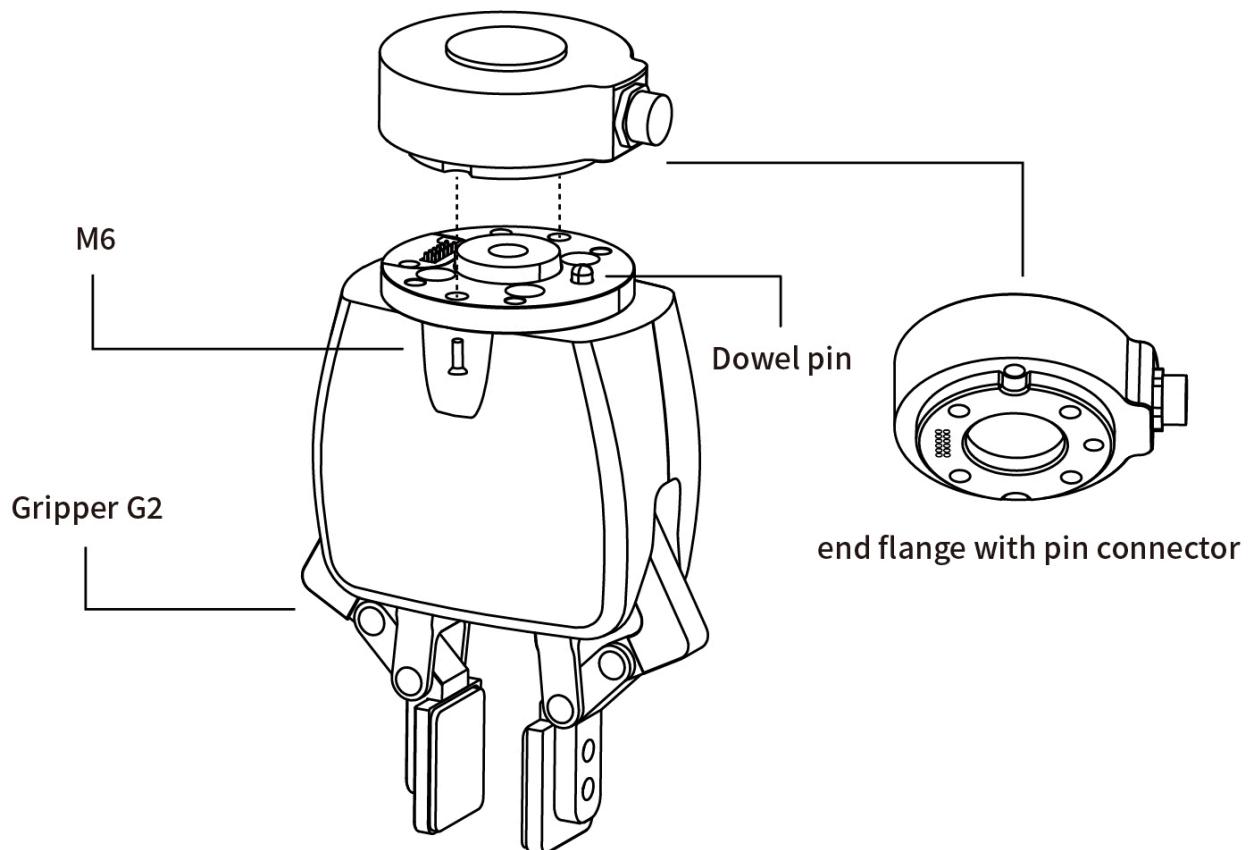

### 2.2.1 Installation Preparation

1. Move the robotic arm to a safe position (avoid contact with the installation surface or other equipment);
2. Power off the robotic arm (press the emergency stop button on the controller);

### 2.2.2 Installation

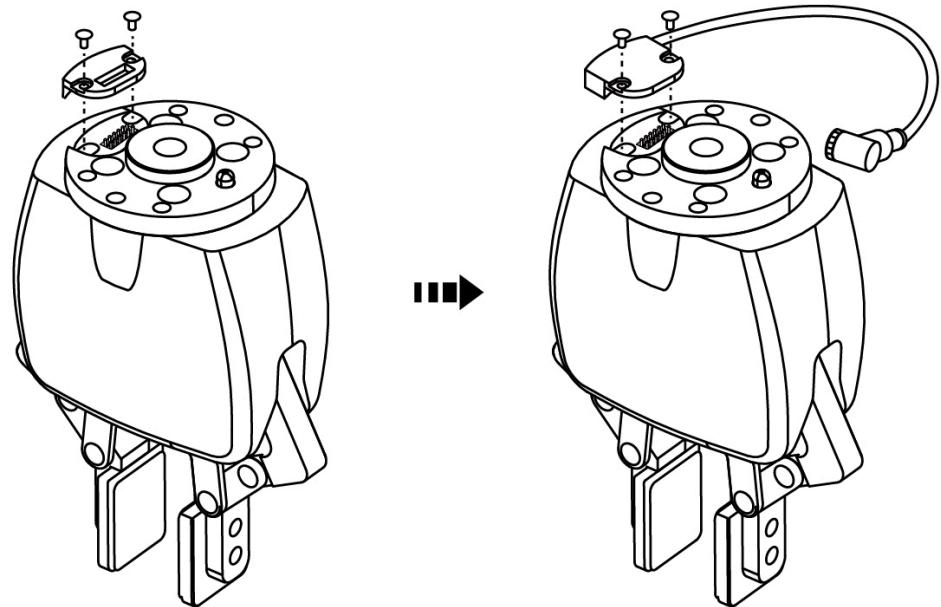

- For contact-type arm ends (UF850, XX1305):

Secure the gripper to the robotic arm end using 2 M6 screws.

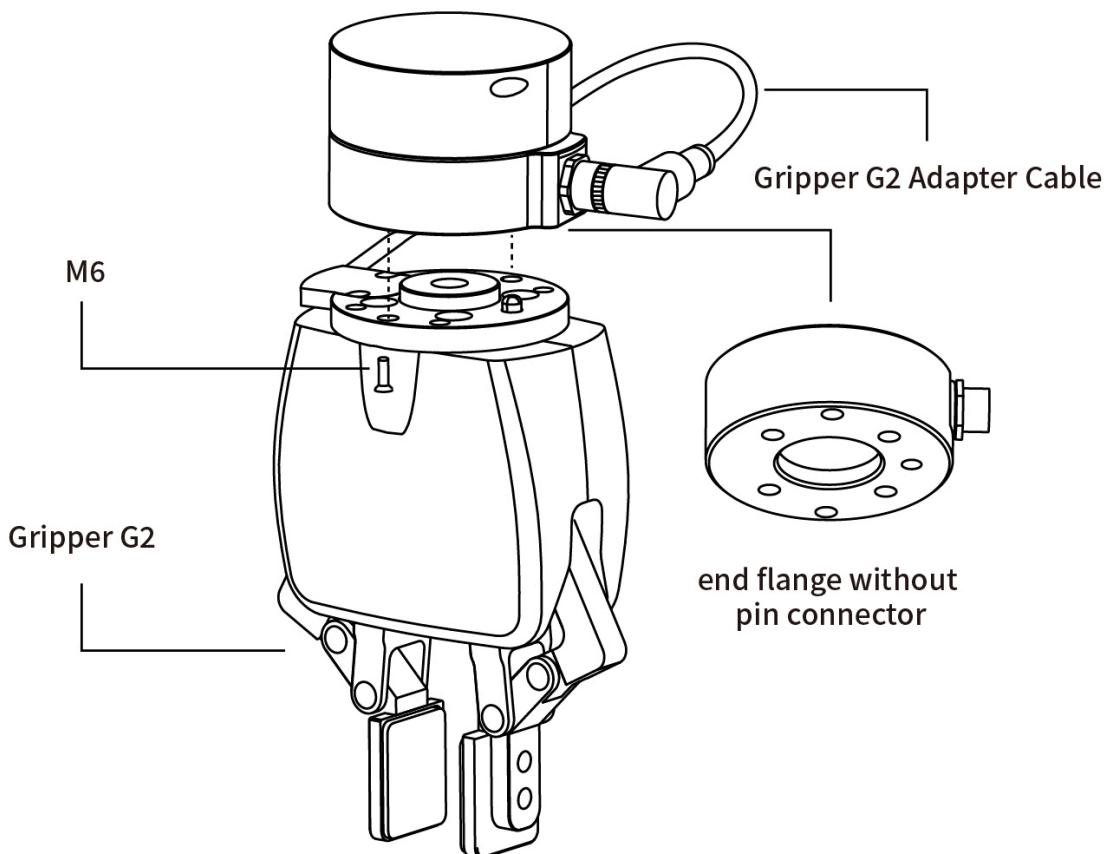

- For non-contact-type arm ends (XX1304 or below):

1. Remove the two screws on the Gripper G2 flange, take off the black cover, and replace it with the silver cover and Gripper G2 adapter cable;

2. Secure Gripper G2 to the robotic arm end using 2 M6 screws;
3. Connect the Gripper G2 adapter cable to the robotic arm end.

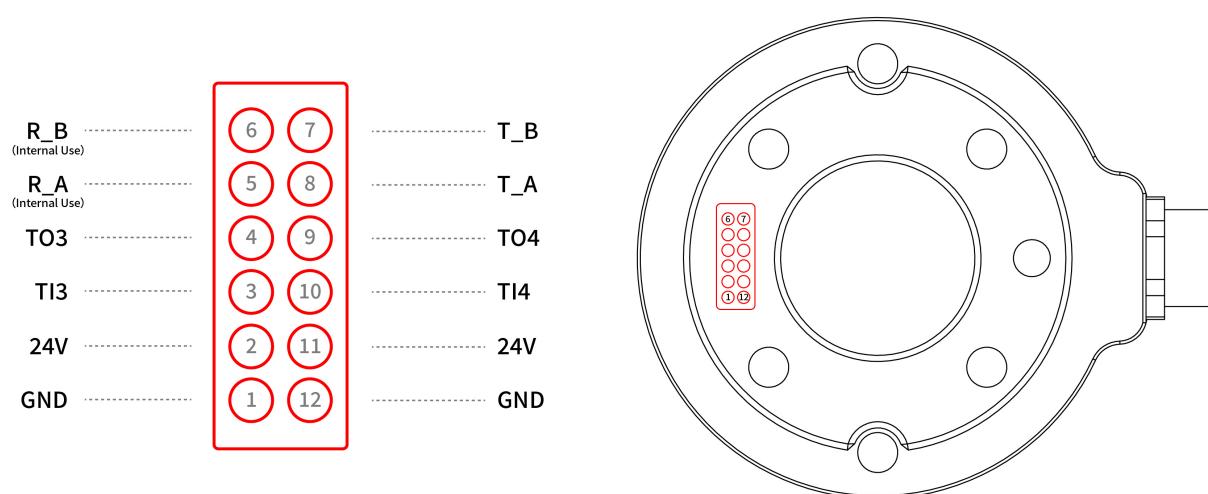

**CAUTION:**

1. Always power off the robotic arm during Gripper G2 installation. Ensure the emergency stop button is pressed and the power indicator is off to prevent failures caused by hot-plugging.
2. When connecting Gripper G2 to the robotic arm, ensure alignment of positioning holes on both interfaces. The male pins on the Gripper G2 cable are delicate – avoid bending them during installation/removal.

## 2.3. Electrical Setup

### 2.3.1 Contact-Type Interface

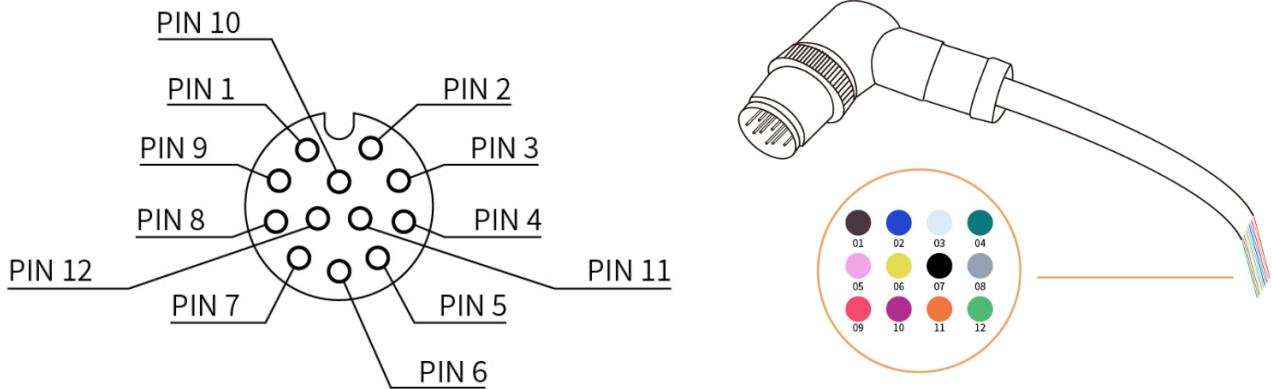

Contact-type interface definition:

Signals used by Gripper G2: Two 24V, two GND, T\_A, T\_B.

### 2.3.2 Aviation Plug Interface

The Gripper G2 aviation plug interface is shown below.

The 12 wires inside the cable have different colors representing different functions. Refer to the table below:

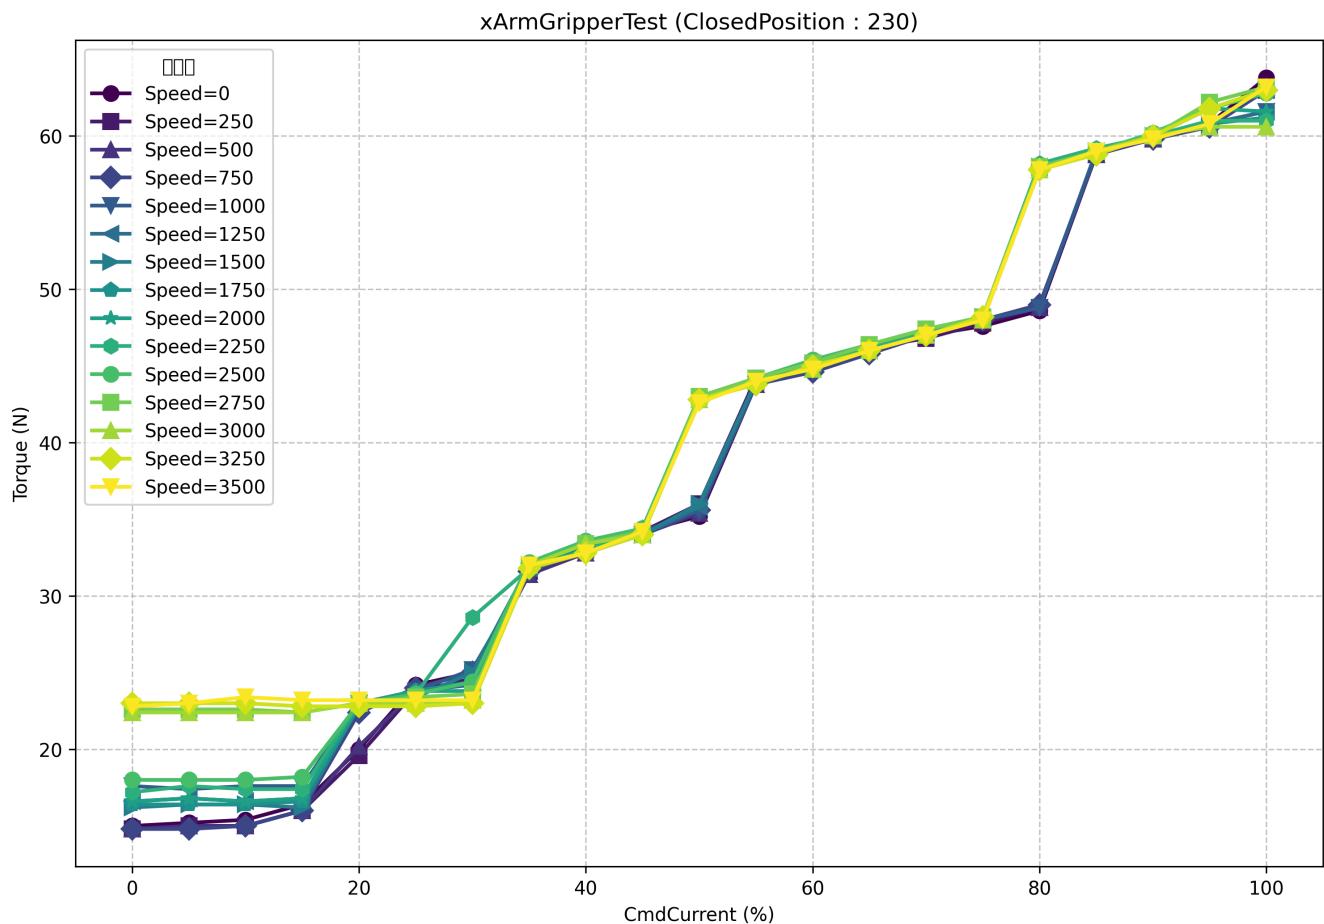

| Pin | Color       | Signal               |
|-----|-------------|----------------------|
| 1   | Brown       | +24V (Power)         |
| 2   | Blue        | +24V (Power)         |
| 3   | White       | 0V (GND)             |
| 4   | Green       | 0V (GND)             |
| 5   | Pink        | User 485-A           |
| 6   | Yellow      | User 485-B           |
| 7   | Black       | Tool Output 0 (TO0)  |
| 8   | Gray        | Tool Output 1 (TO1)  |
| 9   | Red         | Tool Input 0 (TI0)   |
| 10  | Purple      | Tool Input 1 (TI1)   |
| 11  | Orange      | Analog Input 0 (AI0) |
| 12  | Light Green | Analog Input 1 (AI1) |

Signals used by Gripper G2: 24V (PIN1 and PIN2), GND (PIN3 and PIN4), 485A (PIN5), 485B (PIN6).

# 3. Control Methods

Programmable Parameters:

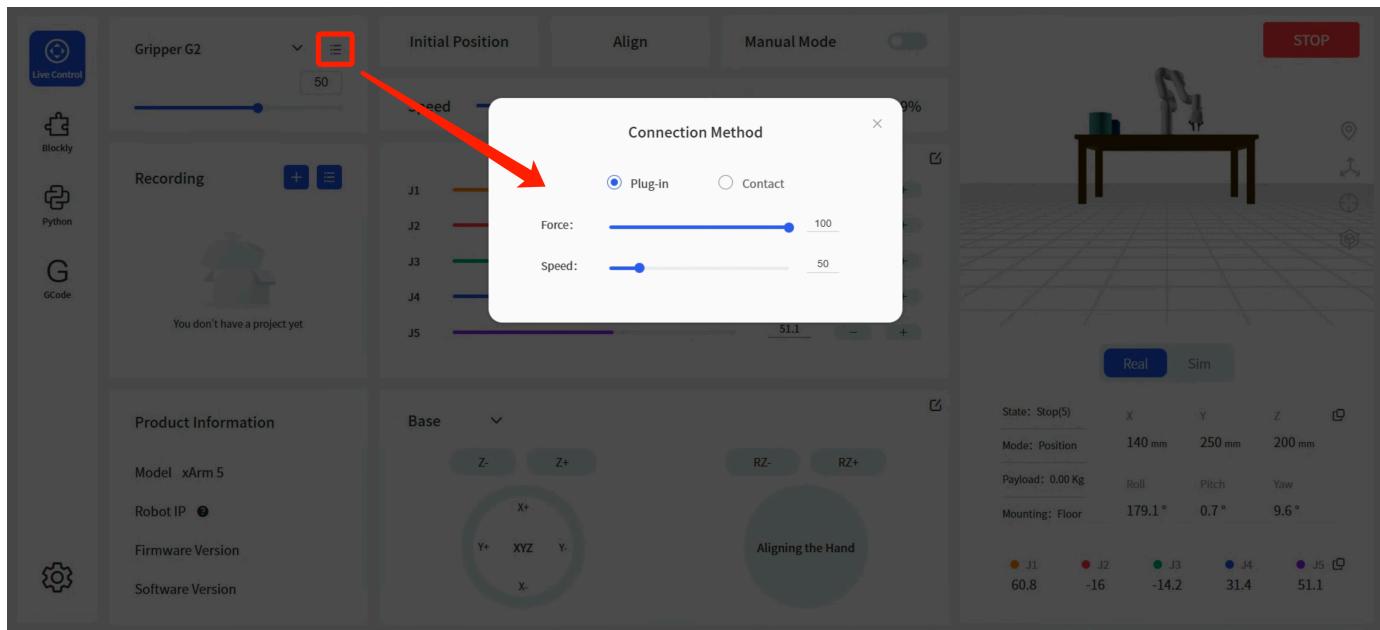

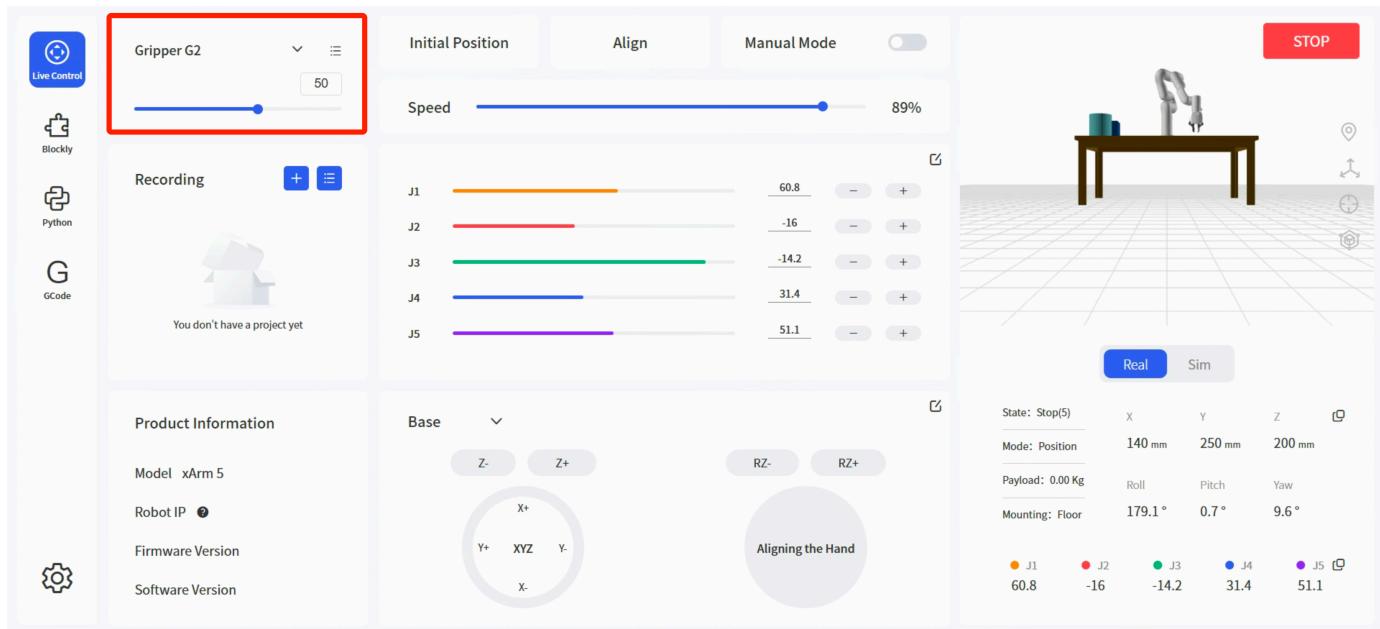

- Position: 0-840mm;
- Speed: 15-225mm/s;
- Force: 1-100 (percentage), The force setting value is expressed as a percentage, so refer to the following chart for the corresponding actual force.

## 3.1 UFACTORY Studio

### 3.1.1 Live Control

Enter the Live control page, select Gripper G2, and perform position control (range 0-840). Click the button in the upper right corner to select connection mode and adjust gripping force/speed.

### 3.1.2 Blockly Control

Blockly provides 3 blocks for Gripper G2 control:

- Set Gripper G2 pos[] speed[] force[] wait[]
- Set Gripper G2 [variable] pos[] speed[] force[] wait[]
- Object gripped by Gripper G2 timeout[]

### 3.1.3 Modbus RTU Control

Go to Settings → External Devices → RS485, select Modbus RTU protocol, and send corresponding commands.

Refer to Chapter 4: Modbus RTU Protocol for details.

The screenshot shows the "External Devices" settings for RS485:

- Left sidebar:** Motion, Externals (selected), Robot IO, Controller IO, Torque Sensor, RS-485 (selected), Modbus TCP, Safety, General, My Device.
- Top bar:** RS-485 Port: Robot Arm, Baud Rate: 2000000, Protocol: **Modbus RTU** (highlighted with a red box), Timeout: 30 ms.
- Table:** A table for Modbus RTU commands. Columns: Number, Check, Comments, Commands, Delay ms. Rows 1-8 show hex values:
 

| Number | Check | Comments | Commands                           | Delay ms |
|--------|-------|----------|------------------------------------|----------|
| 1      | ✓     |          | 0x08, 0x06, 0x01, 0x00, 0x00, 0x01 |          |
| 2      | ✓     |          | 08 10 07 00 00 02 04 00 00 01 90   |          |
| 3      | ✓     |          | 08 10 07 00 00 02 04 00 00 00 00   |          |
| 4      | ○     |          |                                    |          |
| 5      | ○     |          |                                    |          |
| 6      | ○     |          |                                    |          |
| 7      | ○     |          |                                    |          |
| 8      | ○     |          |                                    |          |
- Bottom controls:** Automatic CRC Check (on), Cyclic (off), Send, Clean Log.
- Log area:** Log (excluding CRC data) with the message "no logs".

### 3.1.4 UFACTORY Private TCP Control

Go to Settings → External Devices → Modbus TCP, select 'UFACTORY Private TCP', and send proprietary TCP commands.

Refer to Appendix for UFACTORY Private TCP details.

| Number | Check                               | Comments | Commands  | Delay ms |
|--------|-------------------------------------|----------|---|----------|
| 1      | <input checked="" type="checkbox"/> |          | 00 01 00 02 00 0D 7C 09 08 10 00 01 90<br>00 01 00 02 00 0D 7C 09 08 10 07 00 00 02 04 00 |          |
| 2      | <input checked="" type="checkbox"/> |          | 00 01 00 02 00 0D 7C 09 08 10 07 00 00 02 04 00<br>00 00 00                               |          |
| 3      | <input type="checkbox"/>            |          |   |          |
| 4      | <input type="checkbox"/>            |          |   |          |
| 5      | <input type="checkbox"/>            |          |   |          |
| 6      | <input type="checkbox"/>            |          |   |          |
| 7      | <input type="checkbox"/>            |          |   |          |
| 8      | <input type="checkbox"/>            |          |   |          |

Cyclic

Log

no logs

## 3.2 Python SDK

Common interfaces (Python SDK  $\geq 1.16.0$ ):

`set_gripper_g2_position` : Set Gripper G2 position, force, and speed

`get_gripper_g2_position` : Get current Gripper G2 position

Python example:

```
import os
import sys

sys.path.append(os.path.join(os.path.dirname(__file__), '../..'))
```

python

```
from xarm.wrapper import XArmAPI

arm = XArmAPI('192.168.1.68')
arm.motion_enable(enable=True)
arm.set_mode(0)
arm.set_state(state=0)

code = arm.set_gripper_enable(True)
print('set gripper enable, code={}'.format(code))

code = arm.set_gripper_g2_position(80, wait=True, speed=200, force=80)
print('set gripper, code={}'.format(code))

print('position=', arm.get_gripper_g2_position())
```

# 4. Modbus RTU Control

## 4.1 Register Address Description

Gripper G2 supports standard Modbus RTU protocol with default baud rate of 2Mbps and gripper ID 0x08. Supported function codes: 0x03/0x06/0x10.

- 0x03: Read Holding Registers
- 0x06: Write Single Register
- 0x10: Write Multiple Registers

### 4.1.1 Monitoring Group:

| Address | Description          |
|---------|----------------------|
| 0x0000  | Operation Status     |
| 0x0001  | Speed (r/min)        |
| 0x0002  | Q-axis Current       |
| 0x0003  | Bus Current          |
| 0x0004  | Command Position (p) |
| 0x0006  | Motor Position (p)   |
| 0x0008  | Position Error (p)   |
| 0x000F  | Current Error Code   |

Status (0x0000)

|          |              |          |              |
|----------|--------------|----------|--------------|
| Bits 1:0 | 00: Stopped  | Bits 3:2 | 00: Disabled |
|          | 01: Moving   |          | 10: Enabled  |
|          | 10: Grasping |          |              |

### 4.1.2 Fn1xx Control Parameters

| Address | Description    | Range | Unit | Default |
|---------|----------------|-------|------|---------|
| Fn100   | Gripper Enable | 0-1   | -    | 0       |
| Fn109   | Fault Reset    | 0-1   | -    | 0       |

### 4.1.3 Fn3xx Speed Parameters

| Address | Description | Range    | Unit  | Default |
|---------|-------------|----------|-------|---------|
| Fn303   | Speed Cmd   | 0-0xFFFF | r/min | 2000    |

### 4.1.4 Fn5xx Torque Parameters

| Address | Description       | Range | Unit | Default |
|---------|-------------------|-------|------|---------|
| Fn500   | Grasp Current Cmd | 0-100 | -    | 50      |

### 4.1.5 Fn6xx Communication Parameters

| Address | Description | Range  | Unit | Default |
|---------|-------------|--|------|---------|
| Fn600   | Device ID   | 1-255  | -    | 8       |
| Fn601   | Baud Rate   | 0: 4800 1: 9600 2: 19200 8: 921600 9: 1M10: 1.5M11: 2M | bps  | 11      |

### 4.1.6 Fn7xx Position Command Group

| Address | Description        | Range    | Unit | Default |
|---------|--------------------|----------|------|---------|
| Fn700   | Position Cmd High  | 0-0xFFFF | -    | -       |
| Fn701   | Position Cmd Low   | 0-0xFFFF | -    | -       |
| Fn702   | Position Fdbk High | 0-0xFFFF | -    | 0       |
| Fn703   | Position Fdbk Low  | 0-0xFFFF | -    | 0       |

### 4.1.7 FnCxx Gripper Control Registers

| Address | Description       | Range    | Unit | Default |
|---------|-------------------|----------|------|---------|
| FnC00   | Gripper Enable    | 0-1      | -    | 0       |
| FnC01   | Speed Command     | 0-0xFFFF | -    | 2000    |
| FnC02   | Grasp Current Cmd | 0-100    | -    | 50      |
| FnC03   | Position Cmd High | 0-0xFFFF | -    |         |
| FnC04   | Position Cmd Low  | 0-0xFFFF | -    |         |

## 4.2 FnCxx Register Usage Instructions

|                                |                |         |            |
|--------------------------------|----------------|---------|------------|
| <b>FnCxx Control Registers</b> |                |         |            |
| <b>Request Format</b>          |                |         |            |
| Modbus RTU Data                | Gripper ID     | 1 Byte  | 0x08       |
|                                | Function Code  | 1 Byte  | 0x10       |
|                                | Start Address  | 2 Bytes | 0x0C, 0x00 |
|                                | Register Count | 2 Bytes | 0x00, 0x05 |
|                                | Byte Count     | 1 Byte  | 0x0A       |
|                                | Gripper Enable | 2 Bytes | 0x00, 0x01 |
|                                | Speed (3000)   | 2 Bytes | 0x0B, 0xB8 |
|                                | Current (50)   | 2 Bytes | 0x00, 0x32 |
|                                | Position (850) | 2 Bytes | 0x03, 0x52 |
|                                | CRC16          | 2 Bytes | 0x17, 0x4E |
| <b>Response Format</b>         |                |         |            |
| Modbus RTU Data                | Gripper ID     | 1 Byte  | 0x08       |
|                                | Function Code  | 1 Byte  | 0x10       |

| FnCxx Control Registers |                |         |            |
|-------------------------|----------------|---------|------------|
|                         | Start Address  | 2 Bytes | 0x0C, 0x00 |
|                         | Register Count | 2 Bytes | 0x00, 0x05 |
|                         | CRC16          | 2 Bytes | 0x03, 0xC3 |

## 4.3 Modbus RTU Examples

### 1. Enable gripper. Address (0x0100)

```
Tx: 08 06 01 00 00 01 49 6F
```

```
Rx: 08 06 01 00 00 01 49 6F
```

### 2. Set gripper position to 100. Address (0x0700)

```
Tx: 08 10 07 00 00 02 04 00 00 00 64 FA E8
```

```
Rx: 08 10 07 00 00 02 40 25
```

### 3. Read error code. Address (0x000F)

```
Tx: 08 03 00 0F 00 01 B4 90
```

```
Rx: 08 03 02 00 00 64 45
```

### 4. Set gripper enable, position(850), speed(3000), force(50). Address (0x0Cxx)

```
Tx: 08 10 0C 00 00 05 0a 00 01 0b b8 00 32 03 52 17 4E
```

```
Rx: 08 10 0C 00 00 05 03 C3
```

# 5. Errors and Handling

## 5.1 Error Codes

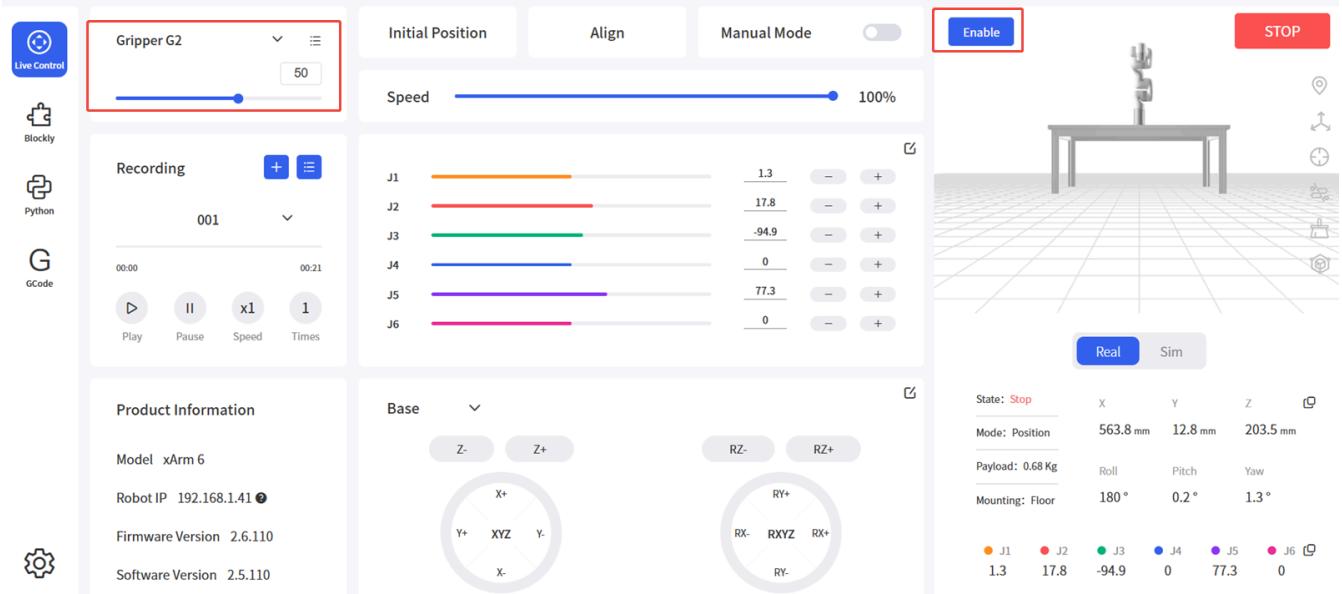

| Software Error Code | Alarm Code | Handling Instructions   |
|---------------------|------------|---|
| G9                  | 0x09       | Gripper current detection abnormal. Restart arm via emergency stop button.                    |
| G11                 | 0x0B       | Gripper overcurrent. Click "Confirm" to re-enable gripper.                                    |
| G12                 | 0x0C       | Gripper overspeed. Click "Confirm" to re-enable gripper.                                      |
| G14                 | 0x0E       | Position command too large. Click "Confirm" to re-enable gripper.                             |
| G15                 | 0x0F       | Gripper EEPROM R/W error. Click "Confirm" to re-enable gripper.                               |
| G20                 | 0x14       | Driver IC hardware error. Click "Confirm" to re-enable gripper.                               |
| G21                 | 0x15       | Driver IC initialization error. Click "Confirm" to re-enable gripper.                         |
| G23                 | 0x17       | Excessive position deviation. Check for obstructions. If clear, click "Confirm" to re-enable. |
| G25                 | 0x19       | Command exceeds software limit. Verify position settings.                                     |
| G26                 | 0x1A       | Feedback position exceeds software limit.   |
| G33                 | 0x21       | Driver overload.  |
| G34                 | 0x22       | Motor overload.   |
| G36                 | 0x24       | Driver type error. Click "Confirm" to re-enable gripper.                                      |

For alarm codes not listed above: Re-enable the robotic arm and gripper. Contact technical support if errors persist.

## 5.2 Error Handling

### 5.2.1 Clearing Errors via UFACTORY Studio

1. Power cycle the robotic arm using the emergency stop button on controller.
2. Enable the arm: Click the guide button in the error popup or the enable button on Live Control page.
3. Select Gripper G2 and control.

### 5.2.2 Clearing Errors via xArm-Python-SDK

Clearing steps: ([Python-SDK API](#))

1. Power cycle robotic arm using emergency stop button
2. Clear errors: `clean_error()`
3. Re-enable arm: `motion_enable(enable=True)`
4. Set motion mode: `set_mode(0)`
5. Set motion state: `set_state(0)`
6. Enable Gripper G2: `set_gripper_enable(enable=True)`

Python example:

```
import os
import sys
import time
```

```

# 6. Technical Specifications

| Gripper G2 (AG1200)             |                         |
|---------------------------------|-------------------------|
| Rated Supply Voltage            | 24V DC 1.5A Max         |
| Absolute Maximum Supply Voltage | 28V DC                  |
| Minimum power consumption       | 1W                      |
| Gripper Weight                  | 800g                    |
| Payload                         | 5kg                     |
| Stroke                          | 84±1mm                  |
| Finger Type                     | Replaceable             |
| Gripping Force                  | 10-50N                  |
| Closing Speed                   | 15-225mm/s              |
| Cycle Life                      | >2,000,000 cycles       |
| Communication                   | RS-485, Modbus RTU      |
| Programmable Parameters         | Speed, Position, Torque |
| Feedback                        | Position                |
| Protection Rating               | IP40                    |
| Operating Temperature           | 0-50°C                  |

# 7. After-Sales Service

---

## 7.1 After-Sales Policy

For product warranty details and information about repairs/returns, please refer to the official after-sales policy:

[UFACTORY Warranty & Returns](#)

---

## 7.2 After-Sales Service Process

1. Contact technical support ([support@ufactory.cc](mailto:support@ufactory.cc)) to confirm product return requirements and determine components needing repair.
2. We will evaluate warranty status according to the after-sales policy and perform repairs either free or paid.
3. After repair and testing, we will return the product. Typically, the entire repair process takes approximately 1-2 weeks.

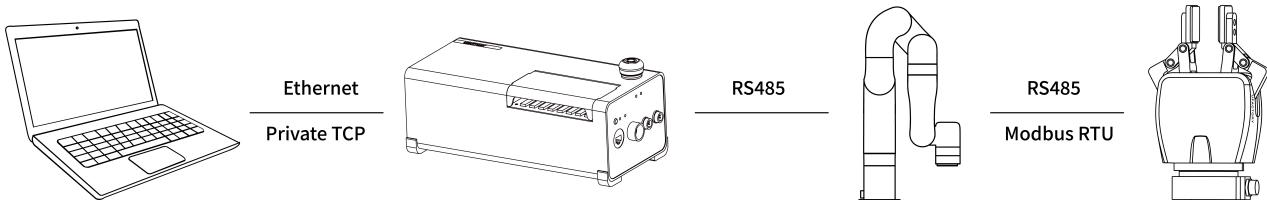

**Note:**

1. When returning products for repair, package them securely in boxes to prevent damage during transportation.

## 8. Appendix - UFACTORY Private TCP Control

Modbus TCP is an application-layer messaging protocol with three frame types: ASCII, RTU, and TCP. Standard Modbus interfaces include RS232, RS422, RS485, and Ethernet, using master/slave communication.

Gripper G2 uses the **UFACTORY Private TCP** protocol, which is similar to but not identical with standard Modbus TCP.

Private TCP communication process:

1. Establish TCP connection
2. Prepare Private TCP message
3. Send message using send command
4. Wait for response on same connection
5. Read response using recv command to complete data exchange
6. Close TCP connection when communication task ends

Parameters: Default TCP port: **502**

Protocol ID: 0x00 0x02 (control - currently only this ID)

All data parsing in this section uses big-endian format.

### 8.1 Read Registers

| Read Registers    |                |         |            |
|-------------------|----------------|---------|------------|
| Request Format    |                |         |            |
| Modbus TCP Header | Transaction ID | 2 Bytes | 0x00, 0x01 |
|                   | Protocol ID    | 2 Bytes | 0x00, 0x02 |
|                   | Length         | 2 Bytes | 0x00, 0x08 |

| <b>Read Registers</b>  |                 |           |                |
|------------------------|-----------------|-----------|----------------|
|                        | Register        | 1 Byte    | 0x7C           |
| Parameters             | Status          | 1 Byte    | 0x00           |
| Internal Use           | Host ID         | 1 Byte    | 0x09           |
| Modbus RTU Data        | Gripper ID      | 1 Byte    | 0x08           |
|                        | Function Code   | 1 Byte    | 0x03           |
|                        | Start Address   | 2 Bytes   | <b>Address</b> |
|                        | Register Count  | 2 Bytes   | <b>N*</b>      |
| <b>Response Format</b> |                 |           |                |
| Modbus TCP Header      | Transaction ID  | 2 Bytes   | 0x00, 0x01     |
|                        | Protocol ID     | 2 Bytes   | 0x00, 0x02     |
|                        | Length          | 2 Bytes   | <b>6+N*x2</b>  |
|                        | Register        | 1 Byte    | 0x7C           |
|                        | Status          | 1 Byte    | 0x00           |
| Internal Use           | Host ID         | 1 Byte    | 0x09           |
| Modbus RTU Data        | Gripper ID      | 1 Byte    | 0x08           |
|                        | Function Code   | 1 Byte    | 0x03           |
|                        | Byte Count      | 1 Byte    | <b>N*x2</b>    |
|                        | Register Values | Nx2 Bytes | <b>Value</b>   |

**Note:** N\* = Register count

## 8.2 Write Registers

| <b>Write Registers</b> |                 |            |                |
|------------------------|-----------------|------------|----------------|
| <b>Request Format</b>  |                 |            |                |
| Modbus TCP Header      | Transaction ID  | 2 Bytes    | 0x00, 0x01     |
|                        | Protocol ID     | 2 Bytes    | 0x00, 0x02     |
|                        | Length          | 2 Bytes    | 9+Nx2          |
|                        | Register        | 1 Byte     | 0x7C           |
| Internal Use           | Host ID         | 1 Byte     | 0x09           |
| Modbus RTU Data        | Gripper ID      | 1 Byte     | 0x08           |
|                        | Function Code   | 1 Byte     | 0x10           |
|                        | Start Address   | 2 Bytes    | <b>Address</b> |
|                        | Register Count  | 2 Bytes    | N*             |
|                        | Byte Count      | 1 Byte     | N*x2           |
|                        | Register Values | N*x2 Bytes | <b>Value</b>   |
| <b>Response Format</b> |                 |            |                |
| Modbus TCP Header      | Transaction ID  | 2 Bytes    | 0x00, 0x01     |
|                        | Protocol ID     | 2 Bytes    | 0x00, 0x02     |
|                        | Length          | 2 Bytes    | 0x00, 0x09     |
|                        | Register        | 1 Byte     | 0x7C           |
| Parameters             | Status          | 1 Byte     | 0x00           |
| Internal Use           | Host ID         | 1 Byte     | 0x09           |
| Modbus RTU Data        | Gripper ID      | 1 Byte     | 0x08           |
|                        | Function Code   | 1 Byte     | 0x10           |
|                        | Start Address   | 2 Bytes    | <b>Address</b> |
|                        | Register Count  | 2 Bytes    | N*             |

## 8.3 Private TCP Examples

### 1. Enable gripper. Address (0x0100)

```
Tx: 00 01 00 02 00 0B 7C 09 08 10 01 00 00 01 02 00 01
```

```
Rx: 00 01 00 02 00 09 7C 00 09 08 10 01 00 00 01
```

### 2. Set gripper position to 400. Address (0x0700)

```
Tx: 00 01 00 02 00 0D 7C 09 08 10 07 00 00 02 04 00 00 01 90
```

```
Rx: 00 01 00 02 00 09 7C 00 09 08 10 07 00 00 02
```

### 3. Read error code. Address (0x000F)

```
Tx: 00 01 00 02 00 08 7C 09 08 03 00 0F 00 01
```

```
Rx: 00 01 00 02 00 08 7C 30 09 08 03 02 00 00
```

### 4. Set gripper enable, position(850), speed(3000), force(50). Address (0x0Cxx)

```
Tx: 00 01 00 02 00 11 7C 09 08 10 0C 00 00 05 0A 00 01 0B B8 00 32 03 52
```

```
Rx: 00 01 00 02 00 09 7C 30 09 08 10 0C 00 00 05
```
